EDUCATION

Kaplan Business School

Master of Information Technology (Extension)

Adelaide, SA

April. 2024 - April. 2026

Ho Chi Minh City University of Technology

Bachelor of Electrical and Electronics Engineering

Ho Chi Minh, VN

Sep. 2011 - May. 2015

EXPERIENCE

DXC - Luxoft

Software Engineer

Ho Chi Minh, VN

Aug. 2022 - Sep. 2024

• Telematics:

- Led full software development lifecycle for automotive telematics systems used by major brands including Toyota and Subaru
- Designed and developed embedded C/C++ components for vehicle ECUs, improving system reliability and performance
- Delivered features ahead of schedule, contributing to faster product release cycles
- Collaborated with cross-regional teams (Singapore, Vietnam) to ensure seamless integration and delivery
- Contributed to successful deployment of production-grade automotive systems used in real-world environments

Bosch Global Software Technologies Vietnam

Software Engineer

Ho Chi Minh, VN

Jun. 2018 - Aug. 2022

• HMI (Human Machine Interface):

- Developed system-level features for infotainment systems in the Nissan-Renault-Mitsubishi alliance
- Bridged UI components with underlying base software to ensure seamless user experience
- Resolved complex system-level issues, improving stability and performance

• Smart Home (IoT):

- Built IoT-enabled software for smart home appliances (washing machines)
- Contributed to end-to-end product development from design to market release
- Ensured high reliability and production readiness of embedded systems

Global CyberSoft JSC

Software Engineer

Ho Chi Minh, VN

Jun. 2015 - Aug. 2018

• Printing Application on Win:

- Developed controller driver applications for industrial printing machines on Windows platforms
- Worked on system-level software in the printing domain, focusing on performance and reliability

PROJECTS

<https://github.com/jerrynguyen0210>

Mobile_Selling_Chatbot_Vietnamese:

- Built AI-powered assistant for automating customer interactions in e-commerce
- Implemented RAG-based architecture to improve response accuracy
- Integrated backend services and web platform to enhance user experience and reduce manual workload

Chatbot_Desktop_App:

- Developed cross-platform desktop application using Qt for interacting with AI services
- Designed scalable client-server architecture integrating LLM and RAG systems
- Supported multiple data sources and backend services for flexible AI interactions

PROGRAMING SKILLS

Languages: C, C++, Python

Frameworks & Tools: Qt, Git, Linux, Docker (basic)

Embedded & Systems: Embedded Linux, Device Drivers, ECU, RTOS (basic)

AI / Data Technologies: LLM, RAG, Backend Integration
